

# INTERIOR DOOR RANGE 2019 | 2020

Doors for a beautiful home

**WE MAKE DOORS** | reliably · expertly · sustainably

 **WESTAG &  
GETALIT AG**

## INTRODUCTION

### WHAT DOES YOUR PERFECT DOOR LOOK LIKE?

#### That's easy: it's as unique as you are!

You want doors that are as individual as a tailor-made suit – doors that complement your style and the way you live. Get inspired! In this magazine you'll find information about the latest interior design trends, different styles, different kinds of doors and various ways of combining them.

But we all know that looks aren't everything – what's on the inside also counts. So from page 54 onwards we take a detailed look at the most important technical features of our doors. You'll soon see why you'll be satisfied with Westag & Getalit interior doors, even after many years.

#### Find exactly what you're looking for

Wondering how you'll find the door that's right for you?

Our specialist dealers are here to help, providing expert advice and planning and ensuring that installation goes smoothly.

# 43

**decors and lacquerings**  
from trendy white and varied  
wood reproductions to exciting  
plain colours

# 3

**surfaces**  
from hard-wearing CPL and de-  
cor foils to elegant lacquer

# 83

**door models**  
from simple to classic, from  
country house to Design styles

# 6

**door frame options**  
from round to square or  
profiled; for rebated and  
flush-closing doors with a great  
emphasis on design

# 30

**kinds of glass**  
from transparent glass and  
structured glass  
to individual  
sandblasted glazing

# 2

**door edge options**  
low-maintenance round edge  
or puristic square  
edge (flush-closing doors  
always have a square edge)

# 3

**door leaf cores**  
from light honeycomb core and  
robust hollow chipboard core,  
to extremely heavy-duty solid  
chipboard core

## WHITE ISN'T REALLY A COLOUR? – TRUE, BUT IT'S A PERFECT CHOICE FOR DOORS

Find more details about white finishes on the following double page and from page 51 onwards

Some doors blend discreetly into the background, while other doors hog the limelight. White doors can do both. Thanks to their neutral, gentle appearance, they lend bright rooms an extra-vibrant touch while ensuring that the furnishings remain the centre of attention. And white doors can become an eye-catcher in their own right when combined with walls and floors in strong, deep colours. Given how versatile they are, it's no wonder that the majority of doors sold are white.

### White can be so much more than just white

Home is where we feel most comfortable. It's where the family comes together, where we meet our friends, and where we live, love and laugh. Within our own four walls we can simply be ourselves. And interior doors can really make a house feel like a home. They're the fittings that we look at and

touch most frequently, which is why it's so important that our doors match our style and our taste. This applies to white doors in particular. Because white is so much more than just white. At Westag & Getalit you can choose from a wealth of features to create the perfect white door for you. We offer a wide

range of different types of doors, decors and surfaces, from cold to warm, plain-coloured to wood, PVC foil to lacquer.

The choice is yours!

### What shade of white is right for me?

This short checklist can help you decide:

- What are the dominant colours in my home?
- What colours are the walls, floors, windows, light switches and furniture?
- Are cold or warm white tones more likely to match?
- Might cosy, white woods be suitable?
- Do I prefer a certain kind of door surface?

### Simply stunning – transparent doors at affordable prices

Direct light where it's needed and create transparency between rooms: doors with see-through panels are available to suit every budget and in many varieties – with round or angular glass openings and to fit both modern and classic styles. The glass is contained by glass beads in matching colours.

#### Adding a touch of light – with openings large and small

Light has a great impact on our wellbeing. Doors with glass openings and muntin frames make the most of the lighting conditions in a room, creating a warm, cosy atmosphere. These eye-catching doors are available with large and small glass openings and come in a range of different decors. The muntin frames add interest to the glass openings and provide some structure. The combination of transparent glass and satin-finished glass in the narrower version lends it a designer touch.

## OAK – FROM 1970S WALL UNITS... TO THE LATEST DESIGNS!

For further oak decors see page 51 onwards.

Think oak is out of date? Think again! This high-density, vibrant wood from the domestic oak tree has once again become something of a favourite in premium furniture manufacturing – and rightly so. Modern oak is much lighter – a world away from the rustic appearance it used to have.

Doors with oak decor make a real statement in modern homes. The new, gentle colours complement both the new country style and more puristic surroundings.

View Design door, Type 2211 in PortaLit® platinum oak cross (EiC 424), glazing: Satinato

Wood reproductions based on real veneers have a harmonious, elegant effect. These extremely robust surfaces have particularly attractive structures and are durable enough to withstand all kinds of day-to-day demands. Oak decors with transverse grain patterns are particularly distinctive.

#### Design doors with strip apertures – for every room

Homes and rooms are becoming more and more open and transparent. And this applies to our doors, too. Design doors with strip apertures allow for refreshing interior and exterior views and make rooms brighter and more pleasant. From large glass surfaces to narrow strip apertures, you can choose what's right for your home. And it doesn't have to be transparent glass: sandblasted and satin-finished glass are also a fantastic match for our smooth Design surfaces.

## COUNTRY HOUSE AND CONTEMPORARY STYLES DON'T GO TOGETHER? OF COURSE THEY DO!

The following pages feature over 20 models

When it comes to the typical country house style, you don't have to just stick to romantic, playful elements anymore. The latest country house trend is fresh, low-key and uninhibited. And it allows you to combine different styles to your heart's content: think design classics placed next to rustic furniture, or vintage industrial objects displayed alongside traditional, handcrafted items.

It's an exciting mix, and doors can play very different roles here – adding a pop of colour or providing a warm, tone-on-tone effect.

Available in all the lacquers pictured above.

Provence door Type 4002 in WestaLack® classic white (RAL 9010)

### Country house style – a bold combination

At home in the city too, our Provence country house doors are versatile and go with all different kinds of interiors, whether they're classic and simple or minimalist and modern. When combined with cool, pared-down home interiors, they create striking contrasts. Why not give it a try yourself: simply upload a photo of your desired room to our door configurator, and off you go!

Doors illustrated are in WestaLack® classic white (RAL 9010). The 'Provence' door series is available in the entire WestaLack® collection; see page 53. Safety glass options can be found on pages 46–47.

Curved beading and premium sandblasted glass are reminiscent of traditional craftsmanship.

#### Loving attention to detail

'Home is not just a place – it's a feeling.' The romantic Provence Roman arched doors create the kind of atmosphere that makes you want to take it easy and let body, mind and soul relax. Curved lines meet striking muntins, and the light shines softly through the glass openings, accentuating the details and patterns in the individual sandblasted glass panels. Provence country house doors are also available with the more understated glass options from the Westag & Getalit glass collection.

Bretagne door Type 3004, WestaLack® classic white (RAL 9010)

#### A country house can be modern too

The Bretagne range brings together state-of-the-art design and the charms of a country house. Linear, streamlined, yet expressive. The moulded profiling lends this range its unique character. Whether in a streamlined design with one cassette, or exciting and lively with four cassettes, the design aims for a clear effect for all straight line forms of expression in the field of interior design. The large glass opening of this door creates plenty of transparency and allows light to shine through.

## LACQUERED DOORS – NOT JUST FOR RETRO INTERIORS!

For more information about the WestaLack® colour collection, go to page 53

The growing trend towards customised interior design shows no sign of slowing down. Increasingly, we're seeing various styles – including retro, open loft style, cocooning, opulent, puristic and natural – being combined in a single space. That's why our lacquered doors are now available in a range of unique colours. You can choose from the six options pictured above, for doors that match your own personal style. Have fun!

Westaline doors 2505-LB-Q with strip aperture in Satinato glazing and Type 2505 in WestaLack® trend lacquer agate (RAL 7015)

### Design between the lines

Our Westaline doors are made for those who love good design: puristic, pared down and bold. The stylish groove detailing lends structure to the door and highlights its elegant simplicity and straight lines. The horizontal grooves form an interesting contrast to the door's height. And for added light, there are embedded strip apertures or, in the more cost-effective version, fitted glass openings.

Doors illustrated are in WestaLack® classic white (RAL 9010).  
The 'Westaline' series is available in the entire WestaLack® collection; see page 53. Suitable safety-glass options can be found on pages 46–47.

### Design on all planes

Those who are passionate about interior design love Westaline. The V-shaped grooves play with the light, conjuring up delicate shadows on the semi-matt surfaces. Vertical joints emphasise the door's slender appearance, while built-in strip apertures allow for interesting views. Combining horizontal and vertical grooving is also an option. And, of course, Westaline doors don't have to be white. The lacquered designer doors are available in six inspiring colours (see page 26).

Scan and configure our entire interior door range with just a few clicks

Smartline door Type 5505 in DekoRit® classic white (DE 223)

The softly rounded grooves cast a beautiful shadow.

#### Good design doesn't have to cost a lot

Smartline is for those who love good design and are smart with their money. The decor foil surface looks like white lacquer. Softly rounded grooves accentuate the door's horizontal lines, and the joints are embossed and slightly broader – all of which creates a timelessly modern effect. The four Smartline models are available in the version DekoRit® classic white.

| Type 5505 |

The 'Smartline' series is available in DekoRit® decor foil classic white (DE 223). Suitable safety-glass options can be found on pages 46–47.

#### Small details – huge impact

Lineo stands for pared-down design with maximum effect. The series combines strong colours and narrow stainless-steel-effect inserts, creating a perfect balance. The custom-fit inserts are embedded in the door leaf. The result: aesthetic flair you can both see and feel.

Doors illustrated are in PortaLit® agate (A 411). 'Lineo' series available in the surface collections PortaLit® and WestaLack®, see pages 51 and 53. Suitable safety-glass options can be found on pages 46–47.

### Practical and eye-catching

Elegant, functional and subtle, they go with any interior style. Also available as lockable versions (warded lock, profile cylinder lock or bathroom door lock) when combined with an end post.

Sliding doors are amazing space savers. They open up our homes and make it easier to move around them. Ideal for small rooms, alcoves and narrow hallways, these doors glide gently along the wall. Slim and distinctive, they are easy to install and can be retrofitted. Our sliding doors are available with or without frames, as lockable versions and to match your other doors – choose whatever suits you.

shell-handle

single tumbler lock (BB)

profile cylinder lock (PZ)

bathroom-lock (WC)

### Construction variants

The basic version: the sliding door element is fitted directly upon the wall. A high-quality guide rail ensures that the door slides quietly and smoothly. The discreet cover angle in a matching decor covers the guide rail completely. It doesn't get any simpler than this.

The basic version (left) is extended using an end post. This construction allows the sliding door to be locked.

For anyone wishing to hide the open wall reveal, a sliding door construction including door frame is the right choice.

**Our recommendation**  
Can also be retrofitted using existing Westag door frames.

The sliding door construction with door frame (left) is extended using an end post that allows the sliding door to be locked. No further equipment is required.

### One system – many possibilities

Glass sliding doors create an open and bright living atmosphere. The transparent and space-saving concept of contemporary architecture is put into practice by adding some room for the customer's glass sliding doors to the 40/80 sliding door system. Whether you want to keep things simple by quickly and easily mounting the system directly on the wall, or whether you'd rather have it as a highlight when renovating an existing frame, our sliding door system provides many benefits. The system can be combined perfectly with other doors, thanks to the same decorations and paintwork – let the space miracle inspire and persuade you.

Pure and elegant:  
The sliding door system for frame-free glass sliding doors, running in front of the wall.

Just right for your doors and frames:  
Both the cover angle and the casing for glass sliding doors are available in the DekoRit® and PortaLit® surface collections, and WestaLack. All decors and lacquerings on page 51.

### Construction variants

The basic version: the glass sliding door is fitted directly on the wall, using the system. A high-quality guide rail ensures that the door slides quietly and smoothly. The cover angle in a matching decor reliably covers the guide rail. The casing for glass sliding doors has a pure, discreet effect.

The basic version (left) is extended using an end post. This construction enables the glass sliding door to be closed flush with the end post (not lockable).

For anyone wishing to hide the open wall reveal, a sliding door construction including door frame is the right choice. Frames, cover angles and casings for glass sliding doors are available in the same decorative patterns.

The sliding door construction with frame (left) is extended with an end post. This construction enables the glass sliding door to be closed flush with the end post (not lockable). Frames, cover angles and casings for glass sliding doors are available in the same decors.

**Practical, beautiful and functional – making life easier for disabled people**

Complex manoeuvring is required when passing through a standard hinged door

Sliding doors are a practical alternative

**Subtle space savers**

We use certain areas of our homes for related activities: sleeping and dressing, cooking and eating, living and working. Sliding doors that run inside the wall aren't just space savers – they're also an ingenious way of connecting living areas. All it takes is a gentle hand movement and the door opens. A second hand movement, and it disappears silently into the wall. Those who are passionate about interior design love these doors, since they free up space on the wall for pictures, lamps and other accessories.

**Construction variants**

Sliding door system running inside the wall for customised, individual installation in the customer's existing wall openings. The transition from the wall opening to the door frame must be prepared accordingly.

Sliding door system running inside the wall for prefabricated cabinet systems. The prefabricated constructions by well-known manufacturers are installed in drywall or masonry. The specially designed door frame covers the edges of the wall opening reliably.

AN AVERAGE DOOR  
SHOULD LAST AROUND  
40 YEARS. SO IT'S WORTH  
PAYING ATTENTION TO A  
FEW IMPORTANT DETAILS.

**Made in Germany**

As the market leader in PVC foil-coated interior doors, we learnt our craft from scratch. Westag & Getalit has been manufacturing its products in Germany for over 100 years. This is where we have found the conditions we need to be able to produce individual doors of certified quality.

**Thinking and acting responsibly**

Our mission is to be of service to people and to protect the environment. The wood that your door is made from is sourced from sustainable forestry and is processed without the use of chemicals that are harmful to the environment and to human health. We have high production standards and use modern, environmentally friendly processes that we are continually improving. Our own QA laboratory, independent audits and strict controls ensure the quality of our products.

**All-round service**

When you need a new door, it's best not to make an ad hoc decision – instead, talk to your nearest Westag & Getalit trade partner. They are on hand to provide you with expert, friendly advice and to help you find exactly what you're looking for.

Is everything clear? Well, it actually depends which glazing you choose. That's because doors with glass panels don't always have to be simple and see-through. Discover the many different ways to bring more light into your life. We offer the right kinds of glass for every type of door, with colours, degrees of transparency, motifs and designs tailored to your requirements. And if you like, we can include an additional, certified level of safety, so that nothing gets broken and you can enjoy your new purchase with peace of mind.

The flowers in the photos show how transparent the different types of glass are.

### Glazing – available for all door models with glass openings and strip apertures

<sup>1)</sup> Available as safety glazing

For larger glass openings and strip apertures we recommend safety glass in compliance with DIN, which is available for many types of glass.  
We use glass types from different manufacturers and therefore may use similar versions.

### Sandblasted glazing options for the View, Lineo, Westaline and Smartline door models and models with glass openings

### Sandblasted glazing for the View, Lineo, Westaline and Smartline door models and for the LA-1, LA-1D, and LA-1B glass openings

<sup>2)</sup> Fits exactly to the layout of the line of the series Westaline Type 2505-LB and Lineo Type 3605-LB (see pages 29 and 34)

All sandblasted glazings are supplied as safety glass as standard and are also available in the colour grey.

For figures with sandblasted glass: the light side is sandblasted glazing and the dark side is transparent glass. All sandblasted glazings are also available in reversed matting if requested.

A PVC foil door that looks and feels like real wood? It has to be seen to be believed. Our PortaLit® CPL doors combine a real-wood effect with an extremely high level of durability. They feel pleasant to the touch and, even after many years of use, look just as good as the day you bought them. To keep them looking their best, simply wipe them down with a damp cloth. Our PortaLit® PVC foil special-touch doors are available in the following finishes: classic touch, soft touch und pure touch.

PortaLit® decor pine grey cross (PiC 44) finish structure pure touch

You can find specific details for all PortaLit® decors on pages 54

 **classic touch**

The classic for single-colour doors. Looks like precious parchment, feels pleasant to the touch and is also hard-wearing and extremely functional.

 **classic touch**

Our tried-and-tested surface for a wood-grained look. The fine grain emphasises the wood effect and makes an especially authentic impression.

 **soft touch**

As delicate as silk but incredibly tough, this surface has a matt finish – and dust just slides off it.

 **pure touch**

With optics and surface feel in perfect harmony, this is just like the real thing. The bold wood design gives the surface a very realistic look and feel.

## A DOOR THAT CAN COPE WITH ANYTHING!

### Protection by anti-bacterial surfaces

 Our anti-bacterial surfaces of PortaLit® CPL doors guarantee additional effective protection from bacteria. 99.99 % of all bacteria are destroyed within 24 hours with the 'bacteria resistant' design. The results are outstanding features, which are effective, non-toxic and harmless, both for people and the environment.

EVERY DAY, MANY OF US HAVE CHILDREN RUNNING AROUND AND PLAYING IN OUR HOMES. BUT THIS ISN'T THE ONLY REASON PEOPLE NEED DOORS THAT CAN WITHSTAND ANYTHING!

Doctors' surgeries, hotels and playgroups also benefit from the practical features of our versatile products. PortaLit® CPL doors can easily withstand scratches, knocks, stains, light, steam, and even cigarette burns and household chemicals.

This is down to our special CPL procedure, during which the PVC foil surface is exposed to particularly high pressure. This results in a DIN-approved, typical, non-porous and particularly durable CPL surface. There is a PortaLit® CPL door to suit every lifestyle – from brilliant single-colour decors to natural-looking wood reproductions.

### Surface properties acc. to DIN, EN, RAL<sup>1)</sup>

### Structure of the PortaLit® finish

## PortaLit® DOORS WITH CPL FINISH

### DECOR COLLECTION BASIC

RAL/NCS specifications are approximations of the colour systems and may deviate depending on the surface finish.

### DECOR COLLECTION TREND

RAL/NCS specifications are approximations of the colour systems and may deviate depending on the surface finish.

**The cost-effective choice – not just for young trendsetters**

Love quality and good design, but on a tight budget? Then our doors with decor foil surfaces are just what you need. DekoRit® decor foil doors are an entry-level product ideally suited to any living situation. They are easy to clean and available in a range of trendy decors. Our DekoRit® surfaces with a wood-like effect are impressive thanks to their true-to-nature reproduction.

#### DekoRit® surface properties

#### Structure of the DekoRit® finish

#### LACQUER COLLECTION TREND

You can find surfaces with matching colours in the Portalit® decor collection on page 47 – an ideal solution if you need more durable doors in the same colours in certain areas.

For orders of one piece or more, colours according to the RAL, NCS or ACC (Sikkens) charts are available as individual lacquer. Ask your specialist dealer for more details.

**Elegance for those who like to be different**

Individualists with a penchant for elegant, semi-matt, lustrous surfaces choose our interior doors with lacquer finishes. Available in two basic colours, four trend colours, and, if requested, in any of the colours listed on the RAL, NCS or ACC colour charts. To protect both people and the environment, we only use environmentally friendly, water-based lacquers and solvent-free UV acrylic lacquers.

#### WestaLack® surface properties

<sup>1)</sup> The terms used for surface structures differ between GetaLit® and PortaLit®.

The PortaLit® ‘classic touch’ designation covers GetaLit® parchment, pore EB and pore F finishes.

PortaLit® 'soft touch' is equivalent to GetaLit® pearl matt, and PortaLit® 'pure touch' is GetaLit® Innato und Legnato.

<sup>2)</sup> RAL/NCS specifications are approximations of the colour systems and may deviate depending on the surface finish.

<sup>3)</sup> Glazing beads for glass opening Type LA-KR in stainless steel

<sup>4)</sup> Glazing beads for glass opening Types LA-3, LA-3Q and LA-40 not available in trend decors or trend lacquering or DekoRit®

## WHICH VERSION WOULD YOU LIKE?

## PRODUCT OVERVIEW: REBATE, EDGES AND CORES

### Rebate options

#### REBATED

Rebated doors have been a classic for decades. They cover the gap between the door frame and the door leaf and hardly let any light through when the door is closed (Illustration frame type SL on page 58).

#### FLUSH CLOSING

For lovers of design: the square version of the flush-closing door. The almost flush closing door to the frame looks reduced and elegant. It looks even more puristic with concealed hinges (Illustration frame type SL on page 58).

### Door edge options

#### SQUARE EDGE

The simplest kind of edge, the square edge has a pared-down, timeless look.

#### ROUND EDGE

Round edges allow for soft transitions and make the door edges more resistant to knocks and dirt.

### Door leaf cores

#### SPECIAL HONEYCOMB CORE

The affordable core for interior doors with low requirements. The fact that it weighs very little is a plus.

#### HOLLOW CHIPBOARD CORE

If you want a solid door that will last a long time, choose the hollow chipboard core – it offers a high level of stability and surface smoothness.

#### SOLID CHIPBOARD CORE

The core for interior doors with high requirements. Ideal for apartment entrance doors with high soundproofing requirements, particularly in combination with a floor seal. Offers a high degree of mechanical strength and very good thermal insulation.

## DOOR FRAMES

### Wooden lining frames

Just like a precious painting, your interior door needs the right frame if you want to get the best effect. We provide a wide range of high-quality wooden lining frames. They are available for all normal wall thicknesses, with architrave widths of up to 100 mm and in various versions – from classic to modern. The flush-closing types allow for a seamless transition from the door leaf to the frame, creating an elegant overall impression.

**Rebated**      **Flush closing**

#### STANDARD WOODEN FRAME WITH ROUNDED EDGE (TYPE SL)

A well-rounded result – no matter what surface you choose. Suitable for all doors with square or round edges. Also available with architrave widths of 65, 75, 80 and 100 mm.

#### WOODEN FRAME WITH NARROW ROUNDED EDGE (TYPE SE)

With a narrow radius – for square and round door edges. Also available with architrave widths of 65, 75, 80 and 100 mm.

#### PROFILED WOODEN FRAME P1

For doors with a great profile! Our profiled frames are the favourites for our Provence country house doors. Available in the Westalack® classic white (RAL 9010) surface finish.

### Determining the correct door-frame dimensions

What size should your door frame be? It must always fit exactly. The table below will help you to correctly calculate the frame size you need to order.

#### Rebated

Size to be ordered (mm)	65	70	80	100	125	145	165	185
Adjustment range: from	65	70	80	100	121	141	161	181
to	75	80	96	116	141	161	181	201
Size to be ordered (mm)	205	225	240	270	290	310	330 <sup>1)</sup>	
Adjustment range: from		201	221	236	266	286	306	326
to		221	241	256	286	306	326	346

#### Flush closing

Size to be ordered (mm)	80	100	125	145	165	185		
Adjustment range: from		80	100	121	141	161	181	
to		90	116	141	161	181	201	
Size to be ordered (mm)	205	225	240	270	290	310	330 <sup>1)</sup>	
Adjustment range: from		201	221	236	266	286	306	326
to		221	241	256	286	306	326	346

<sup>1)</sup> Available for a wall thickness up to 620 mm

### Special frames

Block frames are extremely popular with architects and interior designers and turn every door into a design feature. Depending on the structure and installation, a distinction is made between edge frames and butt frames:

#### EDGE FRAMES

Are simply mounted upon the wall. They allow for door openings with a large clear passage width. They are particularly suitable for low wall thicknesses.

#### BUTT FRAMES

Don't require brickwork abutment at all. They create a door system that is completely flush with the wall in the flush-closing version. Also available in conjunction with a draught excluder.

## WHAT DOES IT MEAN?

### An overview of important technical terms

Have you always wondered how a Westag & Getalit door is properly installed? One thing is certain: there are a lot of things to take into account. For example, the DIN direction of the door is very important. It determines whether the door opens to the right or to the left into the room and what side the handle is on. We have put together a few important technical terms for you below. Prefer to spend your time thinking of other things? Then skip this page and contact your nearest Westag & Getalit trade partner. They will be happy to provide reliable, expert advice.

### Technical terms for door dimensions

### Directions for doors according to DIN

### DIN directions for sliding doors

### DIN dimensions for doors and frames

Door leaf size (rebated)	Door leaf size (flush closing)	Minimum wall opening	Recommended wall opening	Maximum wall opening
<b>Width in mm (for wooden frames)</b>				
610	584	635	650	680
735	709	760	775	805
<b>860</b>	<b>834</b>	<b>885</b>	<b>900</b>	<b>930</b>
985	959	1010	1025	1055
1110	1084	1135	1150	1180
1235	1209	1260	1275	1305
<b>Height in mm (for wooden frames)</b>				
<b>1985</b>	1972	2005	2010	2025
2110	2097	2130	2135	2150
2235	2222	2255	2260	2275
2360	2347	2380	2385	2400
2485	2472	2505	2510	2525

Independent of the DIN dimensions specified in the table on the left, we can manufacture doors in almost every size up to 2485 x 1290 mm.

For most Design and country house doors, sizes up to 2110 x 985 mm are available. For doors with non-standard sizes, the profiles are kept constant and the lateral surfaces are matched to the required size.

### Dimensions for doors and frames

<b>2030</b>	2017	2050	2055	2070
2115	2097	2130	2135	2150

### A brief introduction to fittings

What level of security do you require? The kind of locks you choose will have a significant impact on how happy you'll feel with your new doors. Do you have doors such as apartment entrance doors or a door to the boiler room where it would make sense to use a security lock – or where it's even mandatory? Do you want a special bathroom lock for the bathroom door?

It's also worth looking at hinges. Depending on the door frame type and the amount of strain the door will be under, you can choose from a range of different models. The Tectus TE 340 is great for those who love good engineering and design. The hinges are not visible when the door is closed, and the flush-closing door fits directly into the frame. It's a great example of pared-down design with maximum impact.

## SAFE AND SOUND – DAY AND NIGHT

Everyone wants to feel comfortable at home. This is where doors come in: they play an important role in our lives, giving us that all-important sense of safety and security, protecting us and keeping out noise and unwelcome guests. At Westag & Getalit you can put together your own individual doors with the exact technical features you need. The result: interior doors and apartment entrance doors that are tailored to your requirements and have the functions and the technology that suit you and your lifestyle.

Our recommendation

Hinge (door)    Frame section (frame)

## BASIC PROTECTION FOR PEACE OF MIND

### A simple feeling of security – the basic model for those with high standards

Even our standard version has plenty of features. At Westag & Getalit, that's a matter of course, because we believe that secure doors don't have to come at a high price. Our apartment entrance doors meet strict environmental requirements and withstand tough conditions as standard.

An important detail: all doors from Westag & Getalit bear the RAL quality mark, which certifies that a product has been manufactured in compliance with strict, standardised quality criteria. The recommendations for use in accordance with RAL GZ 426 ensure that you're always on the safe side when realising your construction project.

The use of the appropriate climate class prevents warping if the temperatures vary considerably on either side of the door.

Our recommendation

## IT'S BETTER TO BE SAFE THAN SORRY

### Apartment entrance doors with soundproofing and/or fire protection (optional)

Welcome to the quiet zone. Doors with soundproofing ensure that noise stays where it belongs – outside. Even our standard apartment entrance doors meet all soundproofing and safety requirements in accordance with DIN 4109. This means you get three features in one: soundproofing, security and load-bearing capacity.

Westag & Getalit's fire-rated doors provide a high level of protection against fire. Like all the interior and apartment entrance doors in our range, they look good and have great technical features. In addition to fire-rated doors, we also offer combined versions for additional smoke protection requirements and pure smoke protection doors.

#### Soundproofed door sets: function

Soundproofing class	Laboratory test result	Recommendation for use
SK27	32 dB	Standard apartment entrance door (minimum requirement acc. to DIN 4109)
SK32	37 dB	Apartment entrance door with extra convenience
SK37	42 dB	Apartment entrance door leading directly into the living area, without vestibule (recommended for increased soundproofing as per DIN 4109, Supplement 2)

#### Fire-rated door sets: function

Door structures	Function
Fire-rated doors (in acc. with DIN 4102 and DIN EN 1634)	Protection against fire for 30, 60 or 90 minutes
Smoke protection doors (in acc. with DIN 18095 and DIN EN 1634)	Prevention of penetration by smoke, which contains poisonous gases and impairs visibility

Our tip: the installation of soundproofing doors isn't just a good idea in commercial and industrial buildings. Installing a sound-proof door for the children's room can also be a good idea.

Fire/smoke protection doors are suitable for establishing harmonious shifts between the living space and the garage or boiler room.

## MAKING LIFE DIFFICULT FOR BURGLARS

### Apartment entrance doors with protection against intrusion and burglary (optional)

A burglary is committed somewhere in Germany every two minutes. Many burglars break in during the day, often via the entrance door. With the right security equipment, 40 per cent of break-ins can be prevented. Westag & Getalit doors protect you from uninvited guests and make your home a safe haven.

Our door sets are tested according to DIN and EU standards and have test certificates and the corresponding markings. Depending on your security needs, you can select additional equipment options, such as a three-point locking system or hinge side protection to prevent the door from being levered open. And a spyhole allows you to take a look at every caller before opening the door.

### Recommendations for use acc. to resistance class as per DIN EN V 1627-30 and EN 1627-30

Burglar/intruder profile	Security requirements	WK <sup>1)</sup>	RC <sup>2)</sup>
Casual burglar using simple tools	Standard security level for apartment entrance exposed to an average risk	2	2
Casual burglar using heavy lever tools	Increased security level for apartment entrance exposed to a high risk	3	3

<sup>1)</sup>Widerstandsklasse <sup>2)</sup>Resistance Class
